

# MONTANA NATURAL HERITAGE PROGRAM

TED SCHWINDEN, GOVERNOR

MONTANA STATE LIBRARY BUILDING

## STATE OF MONTANA

1515 EAST 6TH AVENUE

HELENA, MONTANA 59620  
(406) 444-3009

10 SEPTEMBER 1987

### PLANT SPECIES OF SPECIAL CONCERN

The Montana Natural Heritage Program (MTNHP) is inventorying the elements of natural diversity of Montana. The inventory includes plant species, animal species, and plant associations which are rare, endemic, disjunct, threatened, or endangered throughout their range or in Montana, vulnerable to extirpation from Montana, or in need of further research.

The attached list of 369 plant taxa of special concern in Montana represents the list which, with periodic revision, is directing data acquisition by the MTNHP. It has been developed from information supplied by the Montana Rare Plant Project (University of Montana, Missoula, MT), as well as from the scientific literature and herbarium specimens. Field research was initiated during 1986. This list is dynamic, and will be revised as new data become available to MTNHP.

Written comments and suggestions are continually needed on this list, particularly regarding additions or deletions, specific locational information, and general comments for the improvement of the list. The data system (map, manual, and computer files) has been set up, and initial data for many taxa have been entered; MTNHP will eventually be able to supply location information and status data for most of these taxa.

Plant taxa are ranked by a standardized procedure used in all state heritage programs. They are ranked on the basis of their range-wide or global rarity, and on their rarity within the specific state, using these ranking categories:

#### GLOBAL

##### RANK

##### Definition

- |    |  |
|----|--|
| G1 | Critically imperiled globally because of extreme rarity (5 or fewer occurrences, or very few remaining individuals), or because of some factor of its biology making it especially vulnerable to extinction. (Critically endangered throughout range). |
| G2 | Imperiled globally because of rarity (6 to 20 occurrences) or because of other factors demonstrably making it very vulnerable to extinction throughout its range. (Endangered throughout range).   |

- G3        Either very rare and local throughout its range or found locally (even abundant at some of its locations) in a restricted range, or because of other factors making it vulnerable to extinction throughout its range; in the range of 21 to 100 occurrences. (Threatened throughout range).
- G4        Apparently secure globally, though it may be quite rare in parts of its range, especially at the periphery.
- G5        Demonstrably secure globally, though it may be quite rare in parts of its range, especially at the periphery.
- GU        Possibly in peril range-wide, but status uncertain; more information needed.
- GH        Historically known; may be rediscovered.
- GX        Believed to be extinct throughout range; historical records only, continue search.

STATE  
RANK

Definition

- S1        Critically imperiled in Montana because of extreme rarity (5 or fewer occurrences, or very few remaining individuals), or because of some factor of its biology making it especially vulnerable to extirpation from the state. (Critically endangered in state).
- S2        Imperiled in Montana because of rarity (6 to 20 occurrences), or because of other factors demonstrably making it very vulnerable to extirpation from the state. (Endangered in state).
- S3        Rare in Montana (on the order of 20+ occurrences). (Threatened in state).
- S4        Apparently secure in Montana.
- S5        Demonstrably secure in Montana.
- SU        Possibly in peril in Montana, but status uncertain; more information needed.
- SH        Historically known in Montana; may be rediscovered.
- SX        Apparently extirpated from Montana.

Other codes:

- Q        Taxonomic questions or problems involved; more

information needed.

T Rank for a subspecific taxon (subspecies or variety); appended to the global rank for the full species.

It should be emphasized that many of the global and state ranks are constantly being revised or completed; these updated rankings will appear on revised lists as they become available.

The symbols utilized in the Federal Status column denote the categories defined in the U.S. Fish and Wildlife Service Notices of Review (1980, 1983, 1985).

E	Endangered (none in Montana).
T	Threatened (none in Montana).
P	Proposed E or T (none in Montana).
C1	Notice of Review, Category 1 (substantial biological information on file to support the appropriateness of proposing to list as endangered or threatened).
C2	Notice of Review, Category 2 (current information indicates that proposing to list as endangered or threatened is possibly appropriate, but substantial biological information is not on file to support an immediate ruling).
C2*	Category 2, and the taxon is possibly extinct.
3A	Taxa for which the USFWS has persuasive evidence of extinction.
3B	Names that, on the basis of current taxonomic understanding, do not represent taxa meeting the Endangered Species Act's definition of "species."
3C	Taxa that have proven to be more abundant or wide spread than was previously believed, and/or those that are not subject to any identifiable threat.
